WaveDNA Announces Liquid Music 1.8.0 + Liquid Rhythm 1.8.0

A melody, harmony, and rhythm software suite, Liquid Music by WaveDNA is a MIDI toolkit that inspires creativity and helps producers and musicians of all skill levels rapidly produce original song ideas and beats

Toronto, Canada, December 18th, 2022, WaveDNA is proud to announce the launch of Liquid Music v1.8.0, a significant compatibility and stability upgrade along with feature expansions for Liquid Music's clip management workflows.

Liquid Music provides a unique workflow for creating melodies, chords, basslines and beats. WaveDNA's proprietary technology, based on years of research and development, structures raw MIDI data into musical components and layers that can be reorganized in new ways. Liquid Music's algorithms are designed to guide, suggest, and generate new combinations that are highly musical and inspiring.

What's New in Liquid Music 1.8.0

Liquid Music 1.8.0 features a number of new enhancements and significantly increased compatibility. This new version of the Liquid Music plugin addresses many of the recently changing technologies for operating systems and chipsets, with support for Apple Silicon, macOS 11+ & Windows 11.

This version introduces new compatibility with Bitwig and Reason on Windows, alongside a ProTools AAX for Liquid Rhythm (which complements the prior Liquid Music AAX) on macOS & Windows.

Full compatibility has been restored with the Liquid Music Max For Live Device (AMXD) in Ableton Live 11+ on macOS & Windows. This version also introduces native mode compatibility on Apple Silicon.

Installation and setup have been improved and streamlined with Java now completely embedded in Liquid Music 1.8.0, thanks to WaveDNA's new licensing agreement with Azul. All plugin formats now use an embedded Java 1.8 JDK, isolated from any system Java, and using the latest, most secure, and most stable revision as maintained by Azul. This configuration, along with further internal updates has significantly increased platform stability.

Liquid Music 1.8.0 also offers a new user library bank feature that builds off the clip management capabilities opened up by the Project Clips panel that debuted in Liquid Music 1.7.0. These new features enable users to create custom Banks of user content that are consistent across all Liquid Music Projects. This allows for favorite or frequently-used Clip set-ups to be conveniently accessible and recallable at all times.

Pricing and Availability

Liquid Music 1.8.0 + Liquid Rhythm 1.8.0 is available now for the special price of $129 until Jan 18, 2023 from the WaveDNA store. Visit shopify.wavedna.com/collections for more details. Existing Liquid Music and Liquid Rhythm customers have the option to upgrade at a special price.

WaveDNA Announces Liquid Music 1.8.0 + Liquid Rhythm 1.8.0

About Liquid Music:

Liquid Music allows you to produce new song ideas quickly and easily, even when you're low on inspiration. Liquid Music leverages intuitive aspects of musical understanding by allowing you to create original melodies simply by sketching the shapes you'd like to hear. Draw a line or contour on the Arranger and let Liquid Music select the notes that fit harmonically, based on the current harmonic and rhythmic scaffolding, while following your desired shape. Draw an incline and hear your melody rise accordingly—sketch a slope downward and hear the drop in pitch. And if it's not quite right, just redraw and start crafting your next idea in seconds.

Liquid Music separates MIDI clip data into five independent Layers to allow for modular editing—Sketch, Key, Chords, Voice, and Rhythm can all be modified independently while the rest of your performance remains as constant as possible. Swap in a new rhythm and the chords and the melody you Sketched in will stay in place while you find the right groove: Liquid Music will re-fit the notes from your previous idea into new rhythms on-the-fly. Alter your chords and see Liquid Music adapt to your harmonic changes while preserving the voicings, rhythms, and melodic shape. Polish your idea by taking control of the musical Layers—change keys to evoke a different mood, add harmonies, alter the rhythm to humanize the performance, and more. How you want to create is up to you, Liquid Music just helps you do it a whole lot faster.

Liquid Music includes Liquid Rhythm:

An updated version of Liquid Rhythm, WaveDNA's original drum & percussion software, is included with Liquid Music 1.8.0, providing users with a full songwriting toolkit. Liquid Rhythm lets you create intricate, interesting beats with unprecedented speed and precision. It's the first sequencer that lets you make beats using note clusters and patterns instead of individual notes, and it completely streamlines your workflow. Get started using the built-in sample library, trigger your virtual instruments, and experiment with new rhythmic patterns.

Plugin Compatibility:

Liquid Music VST / AU / AAX / Max for Live (AMXD)
Liquid Rhythm VST / AU / AAX / Max for Live (AMXD) and Standalone Application

OS Compatibility:

macOS 10.11 - macOS 13 (Apple Silicon and Intel x64)
Windows 7 - Windows 11 (Intel x64)

About WaveDNA:

WaveDNA is a Toronto-based music software company founded in 2010 to design virtual musical instruments and MIDI tools. Liquid Music and Liquid Rhythm are software plugins used by music makers worldwide to develop original songs using WaveDNA's creativity-inspiring rhythm, melody, and harmony tools, which streamline the composition process for songwriters, producers, and composers.
